ROBERT MOLOTCHKOV
DATE OF BIRTH: MAY 10, 2010

Homozygous ATR kinase deficiency causes severe prenatal replicative stress. Widespread cell death in neural progenitor cells results in **primary microcephaly** (a small, compressed anterior cranial vault)

Born 4 days post-term. Placental degradation causes **perinatal hypoxia** (oxygen deprivation), specifically damaging the developing frontal lobe and hunger centers

Develops **Acute Seckel Syndrome**, causing a sloping forehead, underbite, short stature, and an **IQ baseline of 89**

Hypothalamus (Before Drug Abuse): Hypoxic and genetic damage to the ventromedial nuclei creates a **satiety signaling dysfunction**. Lacking a "fullness" switch, he develops **Binge Eating Disorder** at the age of five.

Prefrontal Cortex (Before Drug Abuse): Severely volume-restricted due to birth defects. This causes an organic executive function deficit and **delayed literacy**

Hypothalamus (After Drug Abuse): Food stops satisfying his desensitized reward center. From ages 12–15, his brain transitions to nicotine, alcohol, and cannabis to chase dopamine.

Prefrontal Cortex (After Drug Abuse): Polysubstance use triggers **premature cortical thinning**. His structural behavioral "brake" is destroyed, causing explosive aggression

Endocannabinoid System (After Drug Abuse): Heavy adolescent cannabis use triggers severe CB1 receptor downregulation, leaving him highly irritable and dependent on external THC for baseline balance.

Sleep Architecture (After Drug Abuse): Combining REM-suppressing substances with a massive 12mg daily melatonin dose shuts down his pineal gland. This creates a permanent melatonin dependency and chronic daytime brain fog.

White Matter Tracts (After Drug Abuse): Historical alcohol use blocks Vitamin B12 absorption, causing transient myelin degradation and slowing his neural processing speed.

Conduct Disorder . . . . . (CD)
Binge Eating Disorder . . . . . (BED)
Polysubstance Use Disorder . . . . . (PUD)
Transient Myelin Degradation . . . . . (TMD)
Oppositional Defiant Disorder . . . . . (ODD)
Intermittent Explosive Disorder . . . . . . (IED)
Borderline Personality Disorder . . . . . (BPD)
Antisocial Personality Disorder . . . . . .(ASPD)

Borderline Intellectual Functioning . . . . . (BIF)
Substance-Induced Neurocognitive Disorder . . . . . (SIND)
Pediatric Metabolic Syndrome / Childhood Obesity . . . . . (PMS)
Circadian Rhythm Sleep-Wake Disorder Substance/Medication-Induced. . . . . (CRSWD)

INCIDENTS . . . . . AGES 0-15

When Robert M was young, from the ages of 4 to 12, he presented with a high intake of low-nutrient foods, resulting in childhood obesity.

The younger brother reports that during a family trip to Florida, Robert M engaged in chronic, unprovoked verbal targeting and name-calling, primarily outside of parental oversight. When the younger brother set a boundary in an ice cream store and informed their father, the father verbally corrected Robert M, causing Robert M to exhibit an emotional breakdown and refuse his food.

During a holiday family gathering, Robert M entered a shared bathroom space and deliberately splashed water on his younger brother. When asked to clarify his motives, Robert M withheld an explanation and used dismissive language to deflect accountability.

When the younger brother was five and Robert M was eight, Robert M engaged in excessive soap usage in the bathroom, framing it as a novel play activity. When his younger brother mirrored the behavior, Robert M denied any involvement or prior modeling when questioned by their father.

When the younger brother left his phone downstairs due to curfew, Robert M repeatedly targeted his personal property by violating the phone case. When confronted with evidence, Robert M utilized minimization and a false alibi to deny the behavior.

Robert M frequently exhibits property destruction when experiencing anger. He damaged his younger brother's desk fan and responded to the confrontation with hostile language, physical blocking, pushing, and a withheld food source paired with a feigned physical strike.

Robert M demonstrates a persistent inability to maintain stable, healthy peer attachments, most notably with his younger brother, Angelo, Cassidy, Mateo, and Cruz. His relationship with his younger brother alternates between intense behavioral provocation and narcissistic dominance behavior. His long-term relationship with Angel is marked by shared middle school delinquency and substance misuse, with Robert M frequently cycling between sudden hostility over minor grievances and brief periods of reconciliation. His romantic partnership with Cassidy involved shared substance misuse and domestic conflict; following the dissolution of the relationship, Robert M engaged in severe verbal degradation, explicit racial profiling, and threats of physical violence toward both Cassidy and his younger brother when the brother attempted to intervene. His former close friendship with Mateo dissolved due to Robert M's persistent boundary violations, though Robert M utilizes denial to cope with the rejection and insists the friendship termination never occurred. His peer connection with Cruz was initially formed around physical fitness but rapidly deteriorated into mutual hostility following derogatory intellectual comparisons made by Robert M, ultimately escalating into a planned physical altercation in which Robert M sustained significant physical injury.

During a family vacation, Robert M responded to a direct parental directive regarding sleep with immediate verbal defiance and oppositional mirroring, attempting to irritate his father.

During a family commute in New York, the younger brother issued a quiet verbal directive ("shut up") due to high noise levels in the vehicle. Robert M reacted immediately with physical force, striking and shaking the brother's seat, paired with a hostile verbal outburst.

Robert M initiated an outdoor activity with his younger brother and a peer, during which he threw a snowball at his brother and dismissed the impact. When the younger brother requested a detour and subsequently left the group due to a disagreement, Robert M and the peer intentionally excluded him by visiting the location alone.

The younger brother was sitting on the back steps of the family residence using his phone when Robert M targeted him with an appearance-based insult regarding physical stature. The younger brother recognized this behavior as a projection of Robert M's personal body image insecurities.

Robert M engages in habitual financial theft, specifically targeting the younger brother's wallet for currency, followed by consistent denial when confronted.
